## Information

This model is designed to be made using Threat Saw alongside hand carving. It is a jigsaw and if you wish you could leave it at that by making the jigsaw from thin stock, but if you wish to take it a little further you could increase the size of the stock and turn it into a full 3 dimensional model.

To add additional detail it is a good idea to round/shape as many of the edges as possible this increase the 3D impact of the model.

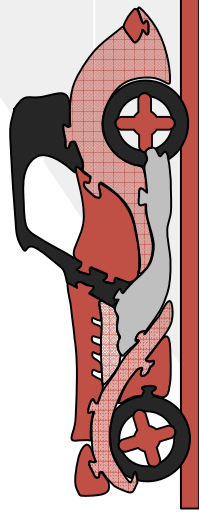

The plan has two parts and assembled plan and an exploded view. To cut the sections you could either :

- Print and apply the assembled plan onto the stock using spray adhesive the cut out using a saw, or
- Print out the exploded view and apply to the stock in the same way cutting each piece separately

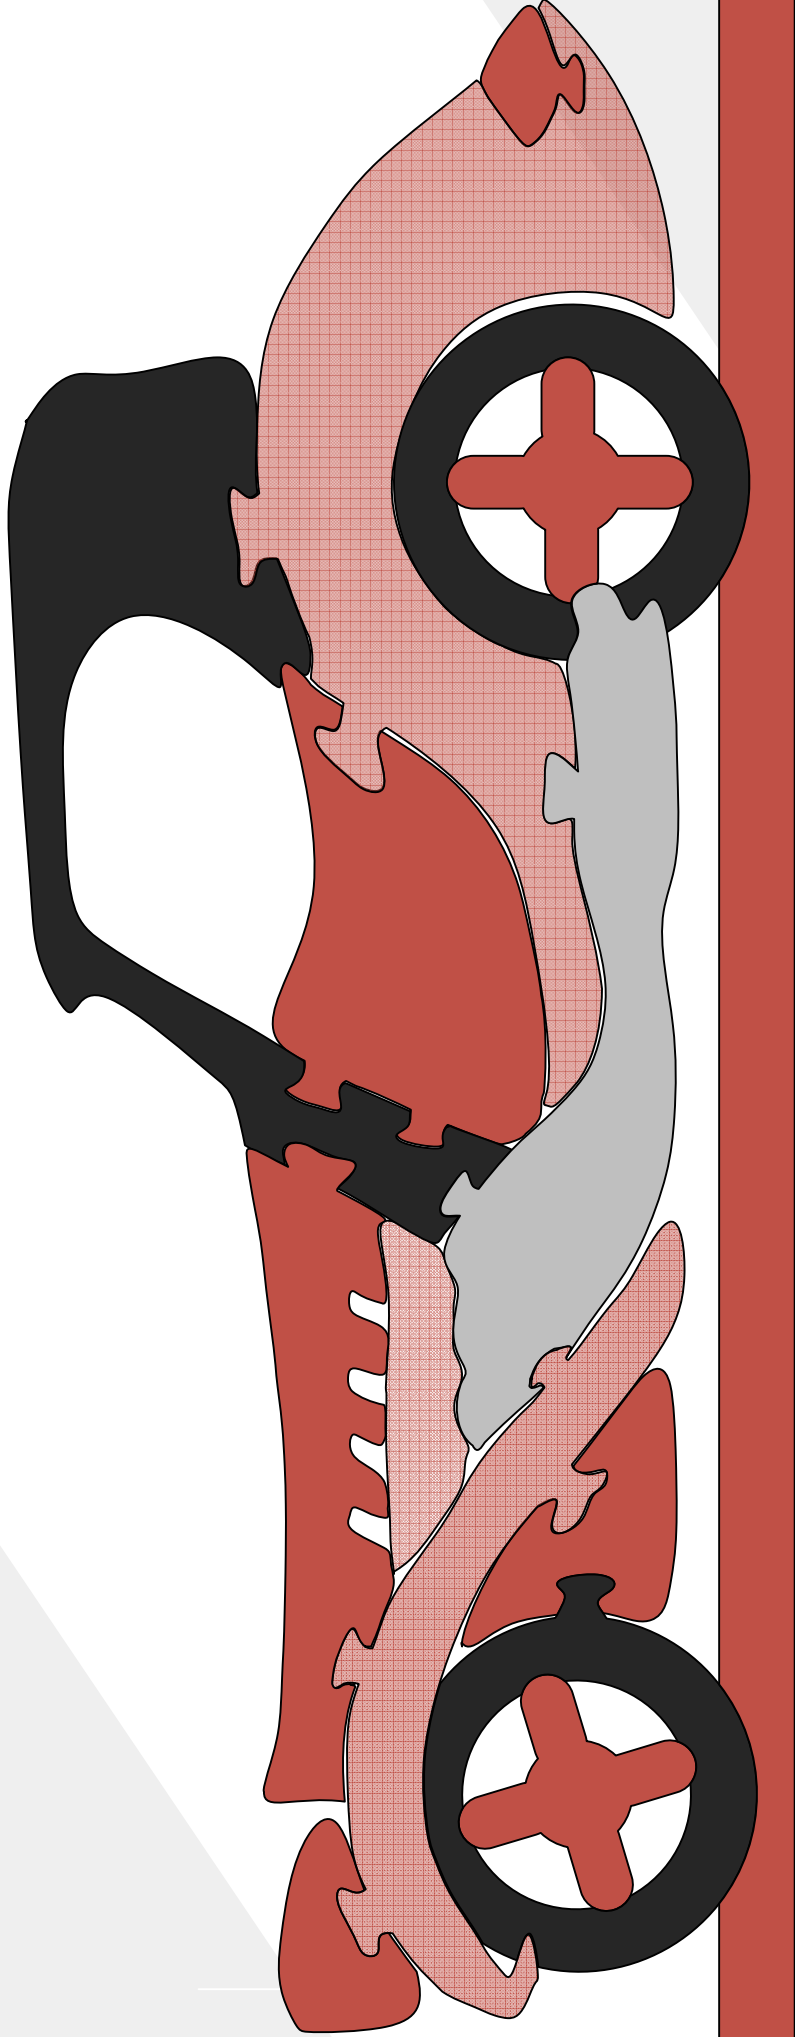

## TOOLS

- Computer/Printer
- Threat Saw
- Carving tool
- Sand Paper
- Spray Adhesive
- Scissors
